### 3. HAZARDS IDENTIFICATION

**EMERGENCY OVERVIEW:** A shiny metallic foil. As shipped, the primary hazard is the sharp edges of the product. Some individuals may develop allergic skin reactions after repeated handling. If melted in a fire, toxic fumes may be released.

# POTENTIAL HEALTH HAZARDS

- **SKIN:** Handling of sharp edges may cause cuts. Repeated contact may cause allergic skin reaction resulting in irritation or dermatitis.
- **EYES:** Not a normal route of entry. Solid particles generated by grinding and sanding may cause irritation.

# METGLAS<sup>®</sup> MBF-15 Nickel-Based Brazing Foil

- **INHALATION:** Vapors and fumes resulting from the grinding, sanding, cutting and/or welding of this material are harmful if inhaled. Symptoms may include irritation of throat and respiratory tract. Exposures may result in "metal fume fever" which can produce flu-like symptoms.
- **INGESTION:** Not a route of entry.
- **DELAYED EFFECTS:**Repeated inhalation of vapors and fumes may result in toxic effects to the lungs.<br/>Cobalt and cobalt foils and nickel and nickel compounds have caused cancer in<br/>laboratory animals and should be treated as 'possible' carcinogens. At present there<br/>is no reliable evidence that cobalt or nickel metal has caused cancer in humans.<br/>Long term nickel exposure may affect kidney function.<br/>Although hexavalent chrome is considered a potential carcinogen, the trivalent<br/>(metallic) chrome in this product is not considered to be a carcinogen.
