Amorphous Alloys for Transformer Cores

Metglas® Amorphous Transformer cores are manufactured from low loss Metglas® 2605SA1 and Metglas® 2605HB1M transformer core alloys. These low loss, high permeability alloys have excellent performance for single and three phase commercial, industrial and distribution transformer applications.

1. Alloys and the specification

<table>
<thead>
<tr>

<td>170.2 ± 1.1</td>
<td></td>
</tr>
</tbody>
</table>

4. Typical Magnetic Properties

In the following pages some examples of the properties on 2605SA1 and 2605HB1M transformer core alloys are shown. AC magnetic properties were measured by 25 cm Epstein test frame method. DC hysteresis curves were measured by a Single Strip Test method. The samples were 25.4 mm wide and 200 mm long. The heat treatment of the samples were performed at 370°C for 2 hours for 2605SA1 alloy and at 340 °C for 2 hours for 2605HB1M alloy in a magnetic field of 2400 A/m directed along the long axis of the ribbon to release stress and induce the magnetic anisotropy along the long axis of the ribbon. These properties are not guaranteed.
These curves are typical.
